

ACCESS MINERAL

**Bridging Resources
Forging Progress**

Supply of raw materials for the production chain

About Us

01

At Access Mineral , we pride ourselves on being a reliable and comprehensive supplier in the steel production value chain. Our extensive portfolio encompasses a wide range of high-quality minerals and raw materials essential for steel manufacturing. From iron ore pellets and concentrates to hot briquetted iron (HBI) and direct reduced iron (DRI), we source and deliver the foundational elements that drive the steel industry forward

Our product lineup extends beyond raw materials to include finished and semi-finished steel products. We offer pig iron, billets, and a diverse array of reinforcing bars and steel sections, all proudly produced in Iran. Each product in our catalog meets rigorous quality standards, ensuring that our clients receive materials that exceed their expectations and contribute to the excellence of their final outputs

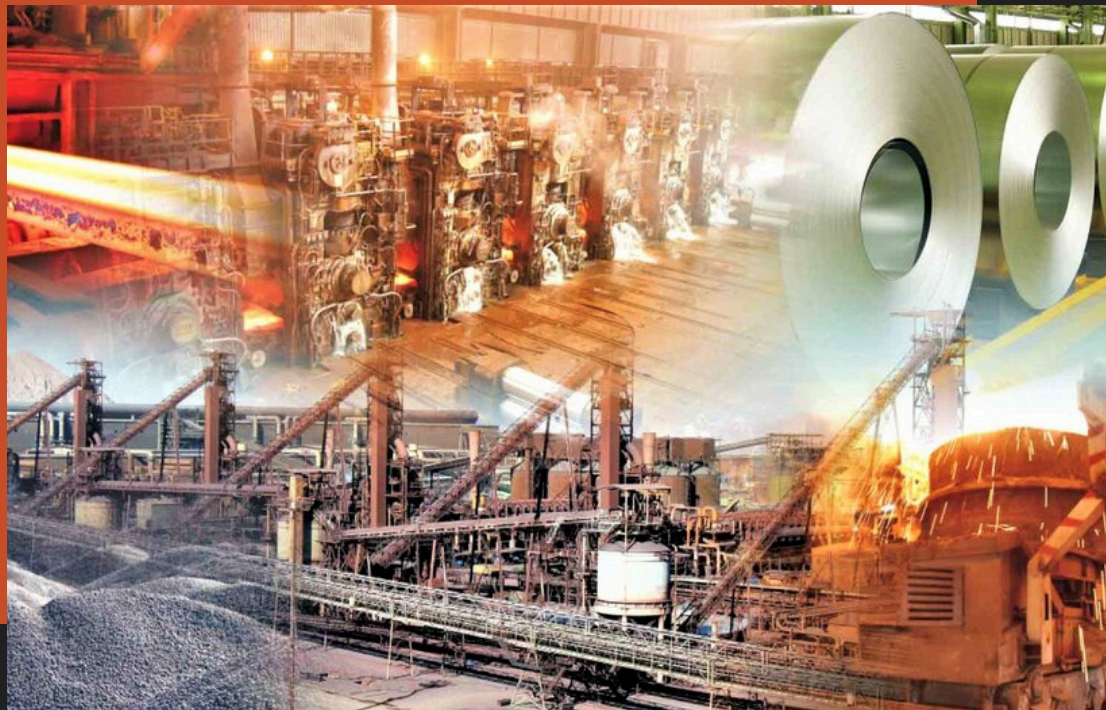

What sets Access Mineral apart is our commitment to providing premium products at highly competitive prices. We understand the global nature of the steel industry, and our extensive network allows us to serve clients worldwide with efficiency and reliability. Whether you're a steel mill seeking raw materials or a construction company in need of finished steel products, Mineral Access is your trusted partner, delivering quality, value, and expertise to fuel your success in the ever-evolving world of steel production

Why Us?

02

At Access Mineral, we offer an unparalleled combination of quality, value, and expertise in the steel industry. Our products, ranging from raw materials to finished steel, are crafted to the highest international standards, leveraging Iran's rich metallurgical heritage and cutting-edge technology. We pride ourselves on delivering premium steel solutions at competitive prices, thanks to our streamlined operations and strategic partnerships. Our comprehensive product range simplifies your procurement process, providing a one-stop-shop for all your steel needs

What truly sets us apart is our commitment to your success. We offer more than just products; we provide a partnership built on reliability, technical expertise, and customer-centric service. Our global reach is complemented by local understanding, ensuring we meet diverse market needs while offering personalized solutions. With a focus on sustainability, timely delivery, and ongoing technical support, Mineral Access is not just a supplier, but a vital ally in your business growth. Choose us for steel products that combine excellence with value, backed by a team dedicated to empowering your projects and operations

Our Products

03

1. Hot Briquetted Iron (HBI):

Our Hot Briquetted Iron is a premium form of Direct Reduced Iron (DRI), compacted at high temperature into dense briquettes. With its high metallization rate and low gangue content, HBI is an ideal feedstock for electric arc furnaces and basic oxygen furnaces, offering excellent handling and transportation properties. Its consistent quality ensures efficient and cost-effective steel production

2. Iron Billet and Bloom:

We offer high-quality iron billets and blooms, semi-finished products essential for various steel manufacturing processes. Our billets and blooms are produced using advanced casting techniques, ensuring optimal chemical composition and mechanical properties. These products serve as excellent raw materials for rolling mills, producing a wide range of long steel products

3. Granulated Direct Reduced Iron (GDRI):

Our Granulated Direct Reduced Iron is a versatile iron ore product, produced through direct reduction and subsequently granulated for ease of handling. GDRI boasts high iron content and low impurities, making it an excellent feed for electric arc furnaces. Its granular form allows for efficient storage, transportation, and feeding into steelmaking processes

4. Iron Ore Pellets:

Our iron ore pellets are high-grade, uniformly sized spheres of concentrated iron ore. Produced through a careful beneficiation and pelletizing process, these pellets offer high iron content and excellent reducibility. They are ideal for direct reduction processes and blast furnaces, contributing to improved productivity and reduced energy consumption in steel production

5. Iron Ore Concentrate:

We provide premium iron ore concentrate, a high-grade product resulting from the beneficiation of raw iron ore. Our concentrate boasts a high iron content and low impurity levels, making it an excellent feedstock for pelletizing plants and sinter plants. Its consistent quality ensures efficient downstream processes in steel production

6. Reinforcing Bars and Steel Sections:

Our range of reinforcing bars (rebar) and steel sections includes various grades and dimensions to meet diverse construction and industrial needs. Produced to international standards, these products offer excellent strength, ductility, and weldability. From standard rebars to specialized sections, we provide the backbone for robust infrastructure and building projects

7. Metallurgical Coke:

We supply high-quality metallurgical coke, a crucial reducing agent in blast furnace operations. Our coke is produced from carefully selected coking coal, ensuring high carbon content, low ash, and optimal physical properties. It provides excellent thermal efficiency and contributes to the production of high-quality pig iron, playing a vital role in the ironmaking process
